Neeraj Dubey

Full Stack Software Engineer with 2+ years of experience building AI-powered web applications using Next.js, React, Node.js, NestJS, and TypeScript. Experienced in developing agentic AI workflows, LLM integrations, chatbots, and scalable frontend applications. Passionate about Generative AI, RAG systems, and modern backend architectures.

WORK EXPERIENCE

FluidAI

Full Stack Web Developer — July 2024 - Present

- Developed production-ready AI interfaces using Next.js, React, Tailwind CSS, and TypeScript.
- Built and maintained conversational AI features integrating LLM APIs, including Multiple LLM models and HeyGen.
- Contributed to an agentic workflow platform enabling AI-powered automation.
- Collaborated with backend teams to integrate REST APIs and AI services.
- Used Docker for development and deployment workflows.
- Improved chatbot functionality, debugging production issues and enhancing user experience.

EDUCATION

(FullTime), MasaiSchool

Full Stack Web Development — Oct 2022 – May 2024

IGNOU

BA Psychology — July 2020 - July 2023

Senior Secondary School

2018 - 2020

SKILLS

- Frontend:- HTML | CSS | JavaScript | TypeScript | React | Next.js | Redux Toolkit | Tailwind CSS | Chakra UI | React Native
- Backend:- Node.js | Express.js | NestJS | FastAPI | REST APIs
- Databases & ORM:- MongoDB | Mongoose | PostgreSQL | Prisma
- AI/LLM:- Python | RAG | Qdrant | LangChain | FAISS | Sentence Transformers | LLM Models | Prompt Engineering | Embeddings | Vector Search
- DevOps & Tools:- Docker | Git | GitHub
- Core Concepts:- Data Structures & Algorithms

PROJECTS

Gen AI Platform

- Built a full-stack Generative AI platform with Retrieval-Augmented Generation (RAG) capabilities, enabling users to chat with AI using their own documents.
- Developed a Python-based embedding service to process documents, generate embeddings, and store them in **Qdrant Vector Database** for efficient semantic retrieval.
- Designed and implemented the main backend using **NestJS**, integrating it with the Python embedding service through scalable API layers to manage document ingestion and AI interactions.
- Developed a responsive chat interface using **Next.js** and **Tailwind CSS**, providing real-time AI conversations with support for both general chat and RAG-based responses.
- Implemented a document upload workflow, allowing users to upload files, index them into the vector database, and seamlessly switch to a RAG agent to ask context-aware questions about their documents.

Tech Stack:

- Python | TypeScript | Next.js | Tailwind CSS | NestJS | MongoDB | Qdrant | FastAPI

Project Links:

- GitHub Repo

Avatar Interaction

- Developed an interactive AI avatar capable of real-time conversation using Mistral AI API for generating intelligent and context-aware responses.
- Integrated facial recognition technology to detect and interpret user expressions, enabling the avatar to respond more empathetically and naturally.
- Created a seamless user experience by combining computer vision, real-time feedback, and conversational AI.

Tech Stacks And Libraries:

- Next js | Redux Toolkit | face.js | Mistral API | HeyGen
